DETAILED ACTION

1. In view of the appeal brief filed on 24 January 2006, PROSECUTION IS HEREBY REOPENED. A new grounds of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) request reinstatement of the appeal.

 If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Le Grand (1,196,252) in view of Wang (6,305,249) (see Appendix A on page 7 of this Office action for examiner added reference numerals in Figure 1 of Wang).

In regards to claim 1, Le Grand discloses the invention including an elongate body (10) having a forward end with an enclosed first compartment having a shape to receive and engage the shank of a punch (12), a plunger slidably mounted in the body

(18) and having a forward end in the enclosed compartment (17), a spring associated with the plunger disposed within a second compartment and yieldingly urging the plunger into the enclosed first compartment (19), an elongated slot in the body (11), and a handle secured to the plunger and extending outwardly through the slot to permit manual grasping thereof to pull the plunger rearwardly against the spring (19).

However, Le Grand fails to disclose a third storage compartment within the body, the second compartment is defined by first and second transverse walls, the first transverse wall separates the first and second compartments and the second transverse wall separates the second and third compartments, and the enclosed first compartment is frusto-shaped having a flat head and tapered side walls. Wang teaches a third storage compartment within a body (27), the second compartment is defined by first (1000 see Appendix A) and second transverse walls (1001 see Appendix A), the first transverse wall (1000) separates the first and second compartments (22 and 25) and the second transverse wall (1001) separates the second and third compartments (25 and 27), and the enclosed first compartment is frusto-shaped having a flat head and tapered side walls (24). Therefore, it would have been obvious to one of ordinary skill in the art, to have provided Le Grand with a third storage compartment, transverse side walls, and a frusto-shaped enclosed first compartment, as taught by Wang, for added convenience so the user can have all the necessary tools at his/her disposal and not interfere with the components of the apparatus, to prevent the plunger and spring from moving side-to-side, and to allow the tool to conform to the old and well known shape of most shanks.

Application/Control Number: 10/786,687

Art Unit: 3724

- Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Le Grand 4. in view of Wang as applied to claim 1 above, and further in view of Randolph, Sr. (2,684,026). Le Grand in view of Wang disclose the invention but fail to disclose a threaded plug that engages the spring to adjust the compression of the spring. Randolph, Sr. teaches that it is old and well known to adjust the compression of a spring with a threaded plug (20). Therefore, it would have been obvious to one of ordinary skill in the art, to have provided Le Grand in view of Wang with a threaded plug that engages the spring to adjust the compression, as taught by Randolph, Sr., to allow the spring to apply a stronger force to the object the spring is biasing.
- Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Le Grand 5. in view of Randolph, Sr. Le Grand discloses the invention including an elongate body (10) having a forward end with an enclosed first compartment having a shape to receive and engage the shank of a punch (12), a plunger slidably mounted in the body (18) and having a forward end in the enclosed compartment (17), a spring associated with the plunger disposed within a second compartment and yieldingly urging the plunger into the enclosed first compartment (19), an elongated slot in the body (11), and a handle secured to the plunger and extending outwardly through the slot to permit manual grasping thereof to pull the plunger rearwardly against the spring (19).

However, Le Grand fails to disclose a threaded plug that engages the spring to adjust the compression of the spring. Randolph, Sr. teaches that it is old and well known to adjust the compression of a spring with a threaded plug (20). Therefore, it would have been obvious to one of ordinary skill in the art, to have provided Le Grand

Art Unit: 3724

with a threaded plug that engages the spring to adjust the compression, as taught by Randolph, Sr., to allow the spring to apply a stronger force to the object the spring is biasing.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Le Grand in view of Randolph, Sr. as applied to claim 5 above, and further in view of Wang. Le Grand in view of Randolph, Sr. disclose the invention but fail to disclose a third storage compartment within the body. Wang teaches a third storage compartment within a body (27). Therefore, it would have been obvious to one of ordinary skill in the art, to have provided Le Grand in view of Randolph, Sr. with a third storage compartment, as taught by Wang, to provide added convenience so the user can have all the necessary tools at his/her disposal and not interfere with the components of the apparatus.

Response to Arguments

7. Applicant's arguments with respect to claims 4-6 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Prone whose telephone number is (571) 272-4513. The examiner can normally be reached on 7:30-5:00, Mon - (every other) Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allan N. Shoap can be reached on (571) 272-4514. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
